Data Retention Module

Clean up your evasys system fast and save

Why Data Retention Module?

- Allows you to keep your evasys system 'lean & mean' by deleting old data you no longer need.
- A smaller evasys database ensures a more efficient back-up process.
- Helps to comply with data retention regulations.
- Directly accessible from within the evasys user interface.
- Has an intuitive 'point & click' user interface.
- Manages the periodical and/ or continuous deletion of various data from the evasys database on basis of previously defined retention rules.
- Based on proven state-of-the-art secure technologies

Storing data in a secured environment with ConArch

If you are interested to know more about safely archiving evaluation results and reports outside your evasys system, then please ask about our ConArch solution.
Besides data retention functions to automatically delete data from evasys, ConArch offers extensive possibilities to store evasys data (such as PDF reports, CVS or SPSS data, questionnaires) in a secured environment.
This facilitates dealing with data privacy regulations while authorized stakeholders maintain quick access to the archived data for reporting and accreditation purposes.

Discover how you may keep evasys lean & mean!

- ☑ After years of evasys use, you notice the system is not as fast & responsive as before.
- ☑ You are facing a lack of overview within evasys due to the amount of obsolete users, courses, questionnaires, surveys and other elements.
- ☑ To comply with guidelines for data retention (e.g. in GDPR context) older data should be deleted or archived and guarded in a secured environment.
- ☑ You want to remove these data in a fast, efficient and reliable manner.
- ☑ Manually deletion is not an option for you.
- ☑ Besides a one-off deletion of obsolete data you would benefit from periodically cleaning up your evasys system.

➡ In that case our **Data Retention Module** and/or ConArch may be the solution for you!

The Data Retention Module allows you to rapidly delete obsolete data from evasys with a few mouse clicks.

In short, the Data Retention Module offers the following benefits:

- Easy installation
- Flawless and consistent automated deletion of data, with logging
- Supports a bottom-up approach to delete elements such as surveys/reports, courses, users and modules as well as the deletion of complete subunits
- Configurable retention rules on different levels (e.g. per element type and separate settings for questionnaires and course types), easy to use
- The deletion may be programmed to take place at night and during the weekend

Result:

- A clean, fast and orderly evasys system
- The automated approach limits time and resources to the minimum
- Guaranteed compliancy with regulations for data retention

Data Retention Module: Technology

The Data Retention plug-in, developed by Consilium, supports evasys version 8.0 or above. It uses the evasys plug-in interfacing, enabling you to work from within the familiar evasys user interface.
The module can either be implemented in your on-premises IT infrastructure or can be offered as part of a hosted evasys environment (evasys Managed Hosting or evasys Cloud Premium).

Consilium: Company profile

Consilium is a specialist in the field of the automatization of course evaluations and in broader sense document and workflow processes. Over the last decade, as international reseller and certified development partner (EPDN) of evasys Consilium has been playing an innovative role in the improvement and modernization of processes in and around evasys.

Besides the development of complete portal applications such as ConArch, Consilium recently also created several standard add-ons for evasys, such as the Data Preparation Module (integration with source systems like Osiris and SAP), the Profile Line Reporting Module, the Data Retention Module and the DB-Importer Module.
